

Twining projekt EU

”Dalje jačanje kapaciteta u fitosanitarnom sektoru iz oblasti sredstava za zaštitu bilja, zdravlja bilja, sjemena i sadnog materijala, uključujući fitosanitarne laboratorije i fitosanitarnu inspekciju”

**A CASE STUDY:
THE IMPORT OF WARE
POTATOES
FROM EGYPT**

COURSE ON PLANT HEALTH CONTROLS

Sarajevo 2016 June 14

The import of ware potatoes into the EU

- ❖ is forbidden due to phytosanitary reasons, under the provisions of Annex III of Dir. [2000/29/EC](#),
- ❖ some derogations are foreseen for the below listed countries, if specific phytosanitary requirements are satisfied:
 - ✓ Algeria, [Egypt](#), Israel, Lybia, Morocco, Syria, Switzerland, Tunisia, Turkey,
- ❖ for European third countries which are either recognized as being free from *Clavibacter michiganensis* ssp. *sepedonicus* (CMS) or in which provisions recognized as equivalent to the EU provisions on combating CMS have been complied with (i.e. [Serbia](#)),
- ❖ ... and two regions of [Lebanon](#) (Akkar and Bekaa).

PHYTOSANITARY REQUIREMENTS FOR IMPORT

- ❑ Points 25.1, 25.2, 25.3, 25.4.1 and 25.4.2 of Annex IV, Part A, Sect. I of [Dir. 2000/29/EC](#) establish specific requirements for ware potatoes from allowed third countries

These requirements concern:

- ❖ *Synchytrium endobioticum* (25.1, for tubers originating in countries where it's known to occur),
- ❖ *Clavibacter michiganensis* ssp. *sepedonicus* (25.2),
- ❖ Potato spindle tuber viroid (25.3, for tubers, other than early potatoes, originating in countries where it's known to occur),
- ❖ *Ralstonia solanacearum* (25.4.1),
- ❖ *Scrobipalpopsis solanivora* (25.4.2) (...)

□ Point 1, of section 1 Annex 1 of the Commission implementing decision of 16 May 2012 No. [2012/270/EU](#) provides emergency measure to prevent the introduction into and the spread within the Union of:

❖ *Epitrix cucumeris*,

❖ *Epitrix similaris*,

❖ *Epitrix subcrinita*,

❖ *Epitrix tuberis*.

SPECIAL CASE FOR EGYPTIAN WARE POTATOES

Pictures by PPS of Autonomous Region of Friuli Venezia Giulia (IT)

SPECIAL CASE FOR EGYPTIAN WARE POTATOES

- ❖ *Ralstonia solanaceum*, causing *potato brown rot*, is an important disease in Egypt, and since 1996, after several interceptions and subsequent measures adopted by France, Finland, Spain and Denmark, EU adopted an import ban for Egyptian potatoes;
- ❖ as a derogation, EU adopted the decision no. [96/301/EC](#), providing a first trace back system for Egyptians ware potatoes;
- ❖ provisions of the decision are no longer applied after more than 5 interceptions of *R. solanacearum* have been confirmed;
- ❖ Areas (by “village” in delta region, and by “basin” in desert) were defined and officially established by Egyptian authorities.

SPECIAL CASE FOR EGYPTIAN WARE POTATOES

- ❖ Later, with the amending decision [2000/568/EC](#) the “pest-free-areas” system was adopted, whereby only potatoes coming from “pest-free-areas”, where *R. solanacearum* is known not to occur, are allowed for trade. Many measures were provided for harvesting, handling, bagging and labelling of ware potatoes.
- ❖ In 2003, after further several interceptions, Egypt unilaterally decided to stop the trade with EU.
- ❖ A subsequent mission of the Commission took place, to verify the system of controls in production and marketing.

SPECIAL CASE FOR EGYPTIAN WARE POTATOES

Following amending decisions (2004/836/EC, 2005/840/EC; 2006/749/EC/ 2007/842/EC; 2008/857/EC; 2009/839/EC and 2010/714/EU):

- ❖ confirmed a general ban of exportation;
- ❖ from 2003/04 to 2010/11 production seasons, the importation into EU of Egyptian potatoes was allowed only for PFAs productions;
- ❖ starting from the season 2011/12 the still in force Decision no. **2011/787/EU** repealed Dec. 2004/4/EC.

DECISION 2011/787/EU OF 29 NOVEMBER 2011

The elements of Dec. 2004/4/EC are confirmed, but:

- ❖ the import of Egyptian ware potatoes is permitted, if specific requirements are satisfied (previously it was “prohibited”);**
- ❖ there is no more the limit of 6 interception maximum to stop exportations, in the season concerned;**
- ❖ there is no more the limitation relating to the EU origin of seed-tubers, either directly of Community origin, or once grown from such potatoes, produced in an approved PFA;**
- ❖ appropriate labelling requirements of ware potatoes, to indicate the Egyptian origin, to prevent tubers from being planted.**

KEY POINTS FOR TRACEABILITY IN THE DECISION 2011/787/EU

- ❖ PFAs should be included in a list (updated over time) communicated by Egyptian authorities to the Commission prior to each import season;
- ❖ PFAs comprise either a “sector” (administrative unit already established which covers a group of “basins”) or a “basin” (irrigation unit);
- ❖ and shall be identified by their individual official code numbers.

TRACEABILITY OF THE TUBERS

- ❖ Prepared in lots, each of which shall be made up exclusively of tubers harvested in one single (controlled) PFA.
- ❖ Clearly labelled on each bag, with an indelible indication of the individual official code number given in the list of PFAs, and of the lot number.
- ❖ Accompanied by the phytosanitary certificate indicating the lot number(s) under the section “Distinguishing marks” of the certificate, and the official individual code number(s), under the section “Additional declaration”.

TRACEABILITY OF THE TUBERS

- ❖ Tubers are exported by an officially registered exporter, whose name or trademark shall be indicated on each consignment. Lists of exporters and exporting packing stations are sent to the Commission.
- ❖ The MSs shall have notified to the Commission the points of entry authorised for the import of potato tubers originating in Egypt, and the name and address of the responsible official body in charge of each point.
- ❖ The responsible official body in charge of the point of entry shall have been notified in advance of the likely time of arrival of consignments of potato tubers originating in Egypt and their amount.

REQUIREMENT FOR THE MSs IN CASE OF *R. solanacearum* FINDING

- ❖ In the case of suspect and confirmed findings of *R. solanacearum*, MSs shall notify them immediately to the Commission and Egypt.
- ❖ MSs shall establish appropriate labelling requirements with regard to tubers, including the indication of the Egyptian origin, with the aim of preventing the tubers of *S. tuberosum* from being planted.
- ❖ MSs shall also take appropriate measures for the disposal of waste after packaging or processing of the tubers of *S. tuberosum* to prevent any spread of *R. solanacearum* as a result of a possible latent infection.

DECISION 2011/787/EU OF 29 NOVEMBER 2011

Potatoes which originate in Egypt shall be permitted if the following requirements are satisfied:

- ❖ requirements concerning the pest-free areas;**
- ❖ requirements concerning the tubers to be imported;**
- ❖ requirements concerning points of entry;**
- ❖ requirements concerning inspections (testing in accordance with Directive 98/57/EC);**
- ❖ requirements concerning testing for latent infection;**
- ❖ requirements concerning notifications;**
- ❖ labelling requirements.**

PHYTOSANITARY CERTIFICATE

That the plants, plant products or plant products described below in representative samples of their mass, herewith examined on 25/04/2009 by Egyptian inspectors in authorized offices of the plant quarantine control Egyptian office of control and are released in conformity with the current phytosanitary regulations of the importing country (which is taken in the destination country certificate)

DESCRIPTION OF THE COMMODITY

Name and address of the exporter: [redacted]
 Name and address of the importer: [redacted]
 Number of packages: 200 Jumbo bag of 200 kg each
 Origin of the commodity: Egypt
 Means of conveyance: [redacted]
 Port of destination: Trieste
 Invoice number: 21000 kg of eggplants per package
 Botanical name: Solanum tuberosum

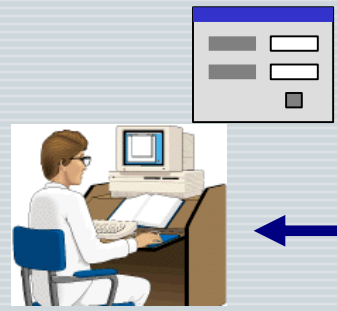

TREATMENT OR AGRI-CULTURAL TREATMENT
 (Applied by the exporter)

VISUAL INSPECTIONS

Symptomless samples

➡ IMPORTATION IS ALLOWED

Suspicious samples

➡ RAPID TEST AND SENT TO LABS

CONFIRMED INFECTION:
IMPORTATION IS BANNED

- the hard copy of the Egyptian certificate is canceled, with a red stamp;
- adoption of proper phytosanitary measures
- interception and notification (Europhyt)

TESTING FOR LATENT INFECTIONS

- ❖ At least one sample from each basin per area shall be taken (200 tubers per sample from a single lot);
- ❖ per each sample tested and confirmed positive, the extract is properly retained and preserved;
- ❖ each sampled lot remains under official control and cannot be marketed or used until the receiving of results of the lab analysis;
- ❖ in case of confirmed infection, the respective lot is subjected to one of the following measures:
 - ✓ refusal;
 - ✓ re-export to a third country (accepting the intercepted consignment);
 - ✓ destruction (burning).

**THANK YOU FOR YOUR
ATTENTION**
